

# NEURAL NETWORKS

---

## **PROGRESSING IN YOUR DATA SCIENCE CAREER**

---

# **LEARNING OBJECTIVES**

- Understand various types of neural networks
- Applications of neural networks
- Apply a neural network model for regression
- Apply a neural network model for classification

---

**OPENING**

---

# ARTIFICIAL NEURAL NETWORKS

---

# OPENING

---

- Neural networks were first studied in the 1940s (!) as a model of biological neural networks
- Many advances since then have improved the ability to train and apply neural networks
- Good for both classification and regression but difficult to interpret model behaviors
- Deep learning in the past few years has been highly successful for otherwise difficult problems

---

# OPENING

---

- Today we will focus on types of neural networks and their applications, and skip some of the more technical details
- Specifically we'll skip training neural networks -- there are many methods in various situations and the details can be tedious (but not particularly difficult)
- Methods include backpropagation, gradient descent, and Hessian-free learning

## INTRODUCTION

---

# PERCEPTRON

# PERCEPTRON

- Perceptrons are the simplest example of a neural network
- The idea is to emulate a single neuron

Structure of a Typical Neuron

Perceptron

$$o = f\left(\sum_{k=1}^n i_k \cdot W_k\right)$$

# PERCEPTRON

- Perceptrons are the simplest example of a neural network
- Given  $n$  inputs and an activation or link function  $f$
- The perceptron computes a linear separating curve

$$o = f\left(\sum_{k=1}^n i_k \cdot W_k\right)$$

# PERCEPTRON

- ▶ Common [activation functions](#) are linear, logistic, tanh, and [softmax](#)
- ▶ We'll see shortly that some are better for classification, some for regression
- ▶ Perceptrons can be combined into multilayer perceptrons or feed-forward network

# FEED FORWARD NN

---

► [Source](#)

# FEED FORWARD NN

► [Source](#)

# FEED FORWARD NN

► [Source](#)

# FEED FORWARD NN

► [Source](#)

---

# FEED FORWARD NN

---

- Typically we use
  - Tanh or logistic layers for input
  - Linear layers for regression output
  - Logistic or Tanh for binary output
  - Softmax for n-class output (yields probabilities)

---

**GUIDED PRACTICE**

---

**TRAINING**

# TRAINING

- ▶ Feed forward neural networks can be trained with [backpropagation](#)
- ▶ [Source](#)

---

# TRAINING

---

- Key Parameters
  - Learning Rate (gradient descent for training)
  - Epochs: number of backpropagation passes (over entire dataset)
  - Batch size: how many training points used at a time to update weights
- Model others behaves as usual with
  - `model.predict`
  - `model.predict_classes`

---

# TRAINING

---

- Tips

- If the error jumps around per epoch, decrease the learning rate
- Taking too long to train: use higher learning rate or batch\_size
- High error after convergence?
  - More hidden layers / neurons
  - Normalize data or use PCA

## **INTRODUCTION**

---

# **UNIVERSAL APPROXIMATION THEORY**

---

# UNIVERSAL APPROXIMATION

---

- One major reason that neural networks are useful is the [Universal Approximation Theorem](#)
- The result basically says that many real vector-valued functions can be approximated arbitrarily well with *some* feed-forward neural network
- This is why neural networks are useful for regression -- given enough data and the right network structure they can fit many common data sets

---

**CLASSIFICATION**

---

# CLASSIFICATION WITH NEURAL NETWORKS

# CLASSIFICATION

- Neural Networks are also extremely useful for classification ([source](#))
- No hidden layers:

# CLASSIFICATION

- Neural Networks are also extremely useful for classification ([source](#))
- One hidden layer:

# CLASSIFICATION

- Neural Networks are also extremely useful for classification ([source](#))

# CLASSIFICATION

- Neural Networks are also extremely useful for classification ([source](#))

---

# CLASSIFICATION

---

- The neural network transforms the data topologically (no tears or breaks) and then separates the data with a hyperplane
- NNs are capable of handling difficult data sets, including:
  - Image processing: recognizing hand-written characters
  - Image compression
  - Financial forecasting
  - Many others

---

**GUIDED PRACTICE**

---

# NEURAL NETWORKS IN PYTHON

---

# NN IN PYTHON

---

- There are many NN libraries for python and other languages
- Python
  - Theano
  - Keras
  - Lasagne
  - TensorFlow
  - Scikit Learn support for NN coming in 0.18
- Lua
  - Torch
- Some of these libraries utilize GPUs for (much) faster training

---

# NN IN PYTHON

---

- Let's look at some examples in Keras
  - Regression
  - Classification

---

**GUIDED PRACTICE**

---

# DESIGNING NEURAL NETWORKS

---

# NN IN PYTHON

---

- Network design is a hard problem
  - Experience helps
  - Evolutionary algorithms are [useful](#) for [design](#)
  - Nice (free) book [available](#)

**RECURRENT NN**

---

# RECURRENT NEURAL NETWORKS

# RECURRENT NEURAL NETWORKS

- Recurrent Neural Networks contain loops ([source](#))

---

# RECURRENT NEURAL NETWORKS

---

- Recurrent Neural Networks contain loops
- This implements feedback and gives neural networks “memory” or context
- Particularly good for predicting sequences, translating text, recognizing objects in images, speech translation
- Commonly referred to as **deep learning**, involving both feature extraction and modeling
- [Nice intro here](#)

# RECURRENT NEURAL NETWORKS

---

- [RNN font analysis](#)

---

**CONCLUSION**

---

# TOPIC REVIEW

---

## **CONCLUSION: Neural Networks**

---

### Pros:

- Flexible
- Good for a variety of tasks
- Good for many types of data

### Cons:

- Can require a lot of data
- Training may be slow
- Many parameters to tune
- Many layer types and activations
- Black Box model

---

# CONCLUSION

---

- Many [more examples](#) for Keras available
- Recommended articles: [Convolutional NN](#),
- Advanced machine learning methods you should explore include Bayesian methods and deep learning

---

# THANKS!
